

Chapter 7 Statics

OUTLINE OVERVIEW

STATICS, p. 119

INTRODUCTORY CONCEPTS IN MECHANICS, p. 120

Newton's Laws of Motion

Newton's Law of Gravitation

Dimensions and Units of Measurement

VECTOR GEOMETRY AND ALGEBRA, p. 121

Addition and Subtraction

Multiplication by a Scalar

Dot Product

Unit Vectors and Projections

Vector and Scalar Equations

The Cross Product

Rectangular Cartesian Components

FORCE SYSTEMS, p. 127

Types of Forces

Point of Application and Line of Action

Moments of Forces

Resultant Forces and Moments

Couples

Moments about Different Points

Equivalent Force Systems

EQUILIBRIUM, p. 131

Free-Body Diagrams

Equations of Equilibrium

TRUSSES, p. 138

Equations from Joints

Equation from Sections

COUPLE-SUPPORTING MEMBERS, p. 142

Twisting and Bending Moments

SYSTEMS WITH FRICTION, p. 145

DISTRIBUTED FORCES, p. 148

Single Force Equivalents

Center of Mass and Center of Gravity

Centroids

Second Moments of Area

Parallel Axis Formulas
